

SANMATI RAJIV SAWALWADE

Mechanical engineer with published lean-manufacturing research; 3+ years owning test validation and release sign-off at scale.

San Jose, CA | (408) 829-8844 | sawalwade.s@northeastern.edu | [LinkedIn](#) | [GitHub](#)

EDUCATION

Northeastern University, San Jose, CA

Expected May 2027

M.S. Information Systems | GPA 4.0 / 4.0

Coursework: Project Management, Algorithms & Data Structures, Application Engineering, Data Science Engineering, Business Analysis.

Dr. D.Y. Patil College of Engineering, Kolhapur, India

Mar 2022

Bachelor of Engineering, Mechanical Engineering

Core coursework: Machine Design, Manufacturing Processes, Mechanics of Materials, Thermodynamics, Fluid Mechanics, CAD/CAM, Industrial Engineering.

TECHNICAL SKILLS

Program Management: Schedule & milestone tracking, scope management, risk assessment, go/no-go sign-off, cross-functional coordination, escalation & resolution, KPI / metrics reporting

Engineering & Process: Value Stream Mapping (VSM), lean process optimization, root-cause analysis, CAD/CAM fundamentals, A/B testing, automated validation, production monitoring

Tools & Platforms: JIRA, Confluence, Microsoft Office (Word / Excel / PowerPoint), Git / GitHub, Agile / Scrum, CI/CD, Docker, AWS, Slack, Grafana

Languages & Data: Python (Advanced), SQL, C, C++, Java, JavaScript, R, Pandas, NumPy

Analytics & BI: Tableau, Power BI, Grafana, Mixpanel, GA4, KPI dashboards, data-driven decision-making

Communication: Stakeholder & leadership reporting, technical writing, global / multi-team alignment, attention to detail

PROFESSIONAL EXPERIENCE

Audifytech

Sep 2022 – Dec 2023

Game Test Engineer

Bengaluru, India

- Owned end-to-end test and release execution for production systems serving 1M+ users; managed test plans, milestones, and launch sign-off across 15+ concurrent releases with global engineering teams.
- Defined launch quality gates (test pass rate, blocker count, drift analysis) as central go/no-go decision owner; drove escalation of release-blocking issues to leadership.
- Drove validation and rollout for ML segmentation and recommendation pipeline; on-schedule release lifted D7 retention 7% and protected \$140K+ ARR.

Gameskraft (\$2.3B unicorn)

Sep 2021 – Dec 2021

Software Engineer Intern

Bengaluru, India

- Managed release validation and rollout coordination across 15+ production launches serving 10M+ users; reported go/no-go recommendations to leadership and achieved zero post-release regressions.
- Coordinated multi-team dependencies under tight deadlines; surfaced LTV drivers via ensemble modeling and hypothesis testing that reduced first-week churn 12% across 3 titles.

Pocket52

Nov 2020 – Aug 2021

Software Engineer Intern

Bengaluru, India

- Led cross-functional coordination between engineering and design; mined 100K+ user journeys via SQL funnel analysis, identified 3 critical bottlenecks, drove fix to production in 60 days lifting conversion 4pp and unlocking \$120K+ MRR.

Dota2booststriker ([Link](#))

Jul 2019 – Oct 2020

Founder & Product Manager

Kolhapur, India

- Sole owner of roadmap, schedule, and full release lifecycle; managed requirements, development timelines, and prioritization tradeoffs across a small engineering team while scaling to \$16K+ ARR by Month 3 (zero downtime, 95%+ retention, 200+ transactions).

PROJECTS

Automated Release Orchestration System

Python · GitHub Actions · Docker · JIRA · Slack

- Built release pipeline pulling JIRA tickets, validating test gates, triggering Docker builds, and posting go/no-go status to Slack; cut manual coordination effort 60%, with auto-generated launch readiness scorecard (test pass rate, blocker count, scope changes) as a single source of truth for on-time launch decisions.

Live Deployment Health Tracker

Python · FastAPI · PostgreSQL · Grafana · Docker

- Real-time dashboard tracking rollout %, error rates, and rollback triggers across staged releases; integrated anomaly alerts reducing mean time to detect from hours to under 2 minutes.

FirstApply | Real-Time Internship Intelligence Platform ([Link](#))

Python, Node.js, PostgreSQL, Claude API, Playwright, BeautifulSoup, FastAPI, Docker

- Architected full-stack job intelligence platform aggregating 2,600+ roles in real-time from 6+ live boards (LinkedIn, Indeed, Greenhouse, YC, HackerNews) using Playwright and BeautifulSoup, with deduplication and structured PostgreSQL storage.
- Built NLP-powered resume-scoring engine on the Claude API that parses resumes, extracts skill and experience vectors, and scores each role 0–100 against up to 5 candidate profiles for personalized fit ranking.
- Engineered real-time alerting pipeline with near-zero notification latency; early applicants are 3× more likely to receive callbacks.

PUBLICATION & ACHIEVEMENTS

- Published Researcher: “Waste Reduction Using Value Stream Mapping,” IJET, Vol. 8 (2022). Applied VSM to optimize a manufacturing process, reducing lead time 27% via bottleneck elimination and cross-functional coordination.
- Google Play Users' Choice Nominee 2023 (Football World) ([Link](#)): owned complete release lifecycle from alpha to production; 8 apps nominated globally.
